Medication Standards and Practices

Refills

Due to a number of factors, including safety, liability and cost, this practice with most others is asking that you **bring a list of/or bring all your medications with you to each appointment and make sure that you have enough refills to last until the next appointment.** We also ask that you time that appointment so that you will have a two week safety margin of medication in case of scheduling changes near the time of your appointment.

This will give you and the doctor or nurse the best chance to discuss allergies, directions, side effects, medication interactions and dosages.

Urine Drug Screening – only for patients using narcotics.

Due to Georgia state laws effective March 2012 I hereby give this practice approval to run a urine drug screen with or without my knowledge at any visit **If I am receiving or using narcotics for any three months in the last 12 months.**
